[ALERT] Fire still present - 5s elapsed
[ALERT] Fire still present - 5s elapsed
[INFO] Fire gone after 5.4s
```

- Video used is an aerial view of the Palisades fire in 2025
- Video is very dark, allowing for better testing of low contrast environments
- Alerts display how long fire is present, when it disappears, and additional alerts for fires present for X amount of time
- Results more consistent than test 2, detection able to pinpoint smaller fires and wider areas of smoke
